

Functional Requirements

Interaction: Interactive Review Lesson with Immediate Feedback

1. The system must allow automatic access to the review lesson after completing the last module content.
2. The system must display questions in text, image, or audio format, with answer options.
3. The system must allow for an optional timer per question.
4. The system must provide immediate feedback (green ✓ or red X) upon selecting an answer.
5. The system must display a "bounce" animation on the selected card.
6. The system must display an explanation below the question with a link to the original content.
7. The system must evaluate the percentage of correct answers and:
 - If <80%, display a "Review this item" card with direct access to the material.
 - If ≥80%, display a congratulations card and a "Continue" button.

Interaction: Viewing and Comparing Progress with Friends

1. The system must display a "Friends/Ranking" tab on the dashboard.
2. The system must display a friends list with an avatar and a progress bar.
3. The system must allow filtering the list by "All," "Online," and "Course X."
4. The system must allow comparing progress between the user and up to two friends (or with the global average).
5. The system must display a graph (rings or stacked bars) showing progress.
6. The system must display details such as % completion, XP accumulated, and milestones reached.
7. The system must allow viewing of friend testimonials if they have been shared.

Interaction: Weekly Collaborative Challenges

1. The system must display the weekly challenges in a section on the Home screen.
2. The system must list the challenges with a title, description, and average group progress.
3. The system must display the details of the challenge with specific objectives.
4. The system must allow inviting friends to the challenge, with multiple selection and a personalized message.
5. The system must include a quick group chat within the challenge.
6. The system must allow the user to contribute to the challenge through a specific activity.
7. The system should update group progress in real time.
8. The system should display user icons next to assigned subtasks.

Interaction: Milestone Post on LinkedIn + Testimonial

1. The system should display a congratulatory pop-up upon completion of a milestone.
2. The system should allow the user to post a testimonial on LinkedIn.
3. The system should display a pre-filled, editable message with suggested hashtags.
4. The system should display a LinkedIn-style preview of the post.
5. The system should allow users to select whether to also share it as a testimonial within the app.
6. The system should request LinkedIn OAuth permissions clearly and optionally.
7. The system should display success or error feedback after attempting to post.
8. The system should display a confirmation screen with statistics if the LinkedIn API allows it.
9. The system should allow users to copy the text to the clipboard if the post fails.
10. The system should maintain the "remember choice" option for future posts.

Non Functional Requirements:

This is the list of usability attributes from ISO 25010 that we will use as a basis for defining non-functional requirements.

Suitability and Recognizable

How well can you recognize whether a product or system is appropriate for your needs?

Learnability

How easy is it to learn to use a product or system?

Operability

Attributes that facilitate its operation and control.

Protection Against User Errors

How well does a system protect users from errors?

User Interface Aesthetics

Refers to whether a user interface is pleasing.

Accessibility

How well can a product or system be used with the widest variety of features and capabilities?

Name	Description	Metric	Usability Attribute
RNF-001	It must be easy and intuitive for the user to find and complete the desired individual challenge.	Success Rate	- Relevance and Recognizability. - Ease of Learning. - Operability.
RNF-002	The user must make as few errors as possible during the team challenge process.	Error Rate	- Protection against user errors. - Operability.
RNF-003	The process of comparing progress with friends must be satisfying for the user.	Subjective User Satisfaction	- Aesthetics of the user interface. - Operability.

Name	Description	Metric	Usability Attribute
			- Relevance and Recognizability.
RNF-004	The time it takes to post the milestone on LinkedIn and testimonials must be simple and fast.	Time Required for the Task	- Ease of Learning. - Operability. - Accessibility.

Requirements Mapping

Functional Requirement (RF)	Related Non-Functional Requirement (RNF)	Mapping Justification
RF - Automatic access to the review lesson after completing the module.	RNF-001: Ease of finding and completing the challenge.	This flow must be intuitive and recognizable for the user.
RF - Display questions in text, image, or audio.	RNF-004: Task time, ease of learning, accessibility.	Must be accessible (e.g., reader compatibility), easy to learn, and fast.
RF - Optional timer per question.	RNF-001: Operability.	Settings must be clear and easy to activate/deactivate.
RF - Immediate feedback (✓ or ✗).	RNF-002: Error protection.	Allows for quick error detection and correction.
RF - Bounce animation on the selected card.	RNF-003: Aesthetic satisfaction.	Contributes to aesthetics and user experience.
RF - Display an explanation with a link to the original content.	RNF-001: Relevance and recognizability.	Helps relate the error to the corresponding content, facilitating learning.
RF - Evaluate the percentage of correct answers and display a review or congratulations card.	RNF-001 and RNF-002: Recognizable and error protection.	Must present the evaluation clearly and facilitate review if performance was poor.

Functional Requirement (RF)	Related Non-Functional Requirement (RNF)	Mapping Justification
RF - Comparison of progress with friends, graph, filters, etc.	RNF-003: Satisfaction and usability.	Requires an attractive, understandable, and usable design.
RF - View and share testimonials from friends.	RNF-003: Aesthetic appeal and usability.	It involves visual aspects and ease of navigation.
RF - Invite friends to the collaborative challenge, chat, real-time progress.	RNF-001 and RNF-002: Operability and error protection.	Group interaction should be fluid and understandable; it should minimize errors in selecting friends or tasks.
RF - Post milestones on LinkedIn, preview, edit message, share in app.	RNF-004: Time required, ease of use, accessibility.	The entire process should be fast, understandable, and accessible for different users.
RF - Show statistics after posting on LinkedIn, copy text if it fails, remind decisions.	RNF-004: Operability and ease of learning.	It helps simplify the process and avoids repeating actions in the future.
