

Design guidelines

1. Visual Consistency and Interactive Components

- **Style Consistency:** Use a consistent style across buttons, text fields, and iconography, as indicated by RNF01. This creates familiarity and reduces the learning curve.
- **Color Palette and Fonts:** Select colors and fonts that reinforce the product's identity and ensure good readability, especially considering the diversity of users.

2. Minimalism and Clarity

- **Clean, Distraction-Free Interface:** Based on RNF02, avoid superfluous elements that can overwhelm the user. A minimalist interface helps users focus on the content and core functionality.
- **Goal-Centered Design:** Prioritizes essential information and actions, allowing users to achieve their goals without unnecessary distractions.

3. Immediate Feedback and Processing

- **Action Indicators:** Implement messages or animations that inform the user when an action is being processed (RNF04), which is essential to avoid uncertainty.
- **Contextual Feedback:** Use microinteractions that confirm the execution of actions (e.g., color changes or pop-up messages).

4. Progress Indicators

- **Progress Visualization:** Incorporate progress bars or indicators (RNF03) so that the user is clear about where they are in the course.
- **Detailed Feedback:** Allows users to immediately see the results of each activity, which reinforces motivation and engagement.

5. Integration of Tasks and Real-World Scenarios

- **Practical Application:** Develop tasks and exercises that allow users to apply what they have learned in real-world scenarios (RNF05). This is especially important for profiles like Sofía's, who seek hands-on experiences, and for José, who prefers self-directed activities.
- **Realistic Context:** Integrate simulations or examples that reflect professional situations, helping users connect theory with practice.

6. Contextual Help and Support

- **Tooltips and Integrated Help:** Offer contextual information (RNF06) through tooltips or small pop-up messages to guide the user without having to consult extensive documentation.
- **Support at Every Step:** Ensure that help is available in the appropriate context, assisting both extroverted users and more reserved users, like José, who may need additional guidance.

7. Sizing and Spacing of Interactive Elements

- **Accessibility and Error Prevention:** Ensure that buttons and interactive fields have adequate dimensions and spacing (RNF07) to avoid accidental clicks, promoting accessibility and a frustration-free experience.
- **Responsive Design:** Consider design variations for different devices, ensuring that elements are easily interactable on small and large screens.
